Key Ideas: Butterflies

Directions: Read the text below about butterflies. Write information you learned by reading the text or looking at the pictures.

The butterfly is a flying insect with two wings and two antennae. They have three main body parts: the head, thorax and abdomen. Butterflies have a long proboscis, or tongue, that they use to drink nectar from plants.

Butterflies come in many different colors and sizes. Butterflies live only around 40 days. Some butterflies only live for three to four days.

A butterfly starts out as an egg and grows into a caterpillar. The caterpillar then forms a chrysalis. Inside of the chrysalis, the caterpillar turns into a butterfly.

You can find butterflies anywhere in the world, except for Antarctica.

What do butterflies look like?

What do butterflies eat?

What is this passage about?

How do butterflies grow?

Where can you find butterflies?

Key Ideas: Manatees

Directions: Read the text below about manatees. Write information you learned by reading the text or looking at the pictures.

The Florida manatee is a big animal that lives in the warm water. Some people say that it looks like a cow. They have flippers and a tail to help them swim.

Manatees only eat plants. These gentle, friendly animals can swim in the water, but they need to stick their nose out of the water to breathe. That is because the manatee is a mammal.

These large mammals are endangered. That means that there are not many manatees left on Earth. Manatees often get hurt by boat propellers. Many people are working hard to save the manatee from extinction.

Where do manatees live?

What do manatees eat?

What is this passage about?

Is a manatee a fish?

Why are manatees in danger?

Name: _____

Date: _____

Directions: Read, or listen to the teacher read, an informational text. Listen to the text and look at the pictures to find key details about the topic. Write each detail and circle if you learned it from the text or the illustration.
